

HTML Elements

2. Difference Between Block-Level and Inline Elements

Block -Level Elements

Block -Level Elements always start on a new line and take up the full width available on the webpage. They are mainly used to create the structure of webpage.

Example:

- <div>
- <p>
- <h1>to<h6>

Inline Elements

Inline Elements

Inline elements do not start on a new line. They only take up as much width as needed And are used inside block-level elements.

Examples:

-
- <a>

Example:

```
<!DOCTYPE html>

<html>

<head>

  <title>Block and inline Elements</title>

</head>

<body>

  <div>

    <p>This is block-level paragraph </p>

  </div>

  <p>

    This is <span>inline text</span>And

    <a href="https://example.com">this is a link</a>

  </p>

</body>

</html>
```

2. Basic HTML Tags

Heading Tags(<h1>to<h6>)

Heading tags are used to create titles and headings. <h1> is the largest heading. While <h6> is the smallest.

Paragraph Tag (<P>)

The <p> tag is used to create paragraphs of text.

Division Tag (<div>)

The <div> tag is a block-level container used to group related elements together

Span Tag ()

The tag is an inline container used to style or group small portions of text.

Sample HTML Page

```
<!DOCTYPE html>

<html>

<head>

    <title>Basic HTML Tags</title>

</head>

<body>

    <h1>Welcome to HTML</h1>

    <h2>Learning HTML Basics</h2>

    <h3>Sample Heading</h3>

    <p>This is my first HTML Paragraph</p>

    <div>

        <p>This paragraph is inside a div element</p>

    </div>

    <p>My name is <span>Aravindh</span></p>

</body>

</html>
```
